DETAILED ACTION

Election/Restrictions

1. Applicants election without traverse of Group I (claims 1-10) on 5/23/2005 is acknowledged. However, it was determined that the subject matter of claims 1-10 encompassed two separate inventions. A supplemental restriction of claims 1-10 follows.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

Group I. Claims 1-6, drawn to a method of detecting the presence or absence of a NMO-specific autoantibody using a NMO antigenic polypeptide, classified in class 435, subclass 7.1.

Group VII. Claims 7-10, drawn to a method of detecting the presence or absence of a NMO-specific polypeptide using a anti-NMO antigen antibody, classified in class 435, subclass 7.1.

The inventions are distinct, each from the other because of the following reasons:

Although there are no provisions under the section for "Relationship of Inventions" in M.P.E.P. § 806.05 for Inventions that are directed to different processes, restriction is deemed to be proper because these methods appear to constitute patentably distinct inventions for the following reasons:

Inventions I and VII are independent and distinct, each from the other, because the methods are practiced with materially different starting materials, materially different process steps for materially different purposes and each method requires a non-coextensive search because of different starting materials, process steps and goals. The method of invention I is

Art Unit: 1646

used for the detection of the condition neuromyelitis optica (NMO) indicated by the presence of NMO-IgG autoantibody. However, the method of invention VII can be used in basic research unrelated to the diagnosis of the condition neuromyelitis optica, for example to detect the presence of aquaporin-4 by immunohistochemistry.

Having shown that these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different and recognized divergent subject matter as defined by MPEP § 808.02, the Examiner has *prima facie* shown a serious burden of search (see MPEP § 803). Therefore, an initial requirement of restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 C.F.R. 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).
